Imbrium Announces New Rep Program for Stormwater Treatment Technologies

Anaheim, CA. StormCON 2009 -- Imbrium Systems®, maker of stormwater treatment technologies, is seeking new independent sales reps for its product line in defined territories in North America, Europe and Asia.

Reps will have the opportunity to represent one or more of the following Imbrium products.

Jellyfish™ Filter System: Imbrium's membrane-based fine sediment filtration system with a reputation for effectiveness, low maintenance costs and a small footprint.

The Sorbtive™ product line: SorbtiveMEDIA and SorbtiveFILTER incorporate an oxide-coated filtration media with unprecedented performance in removing total phosphorus including dissolved and sediment-bound phosphorus.

Stormceptor® systems: These systems effectively treat stormwater and protect waterways, capturing and containing sand, sediment and oil from stormwater. Stormceptor is available in both concrete and fiberglass construction.

Contact information

Dealer applications are now being accepted and reviewed. For more information, please email: info@imbriumsystems.com.

About Imbrium

Imbrium® (imbriumsystems.com) designs and develops stormwater treatment technologies to protect water resources from pollutants. Imbrium has a strong record for innovation in the industry as the creator of the Stormceptor® oil and sediment separator, the Jellyfish fine sediment filter, and Sorbtive™MEDIA and Sorbtive™FILTER for high levels of phosphorus removal. Imbrium's presence at StormCon is Booth #505.
