Camtek Named Exclusive Distributor of Imbrium's Stormwater Treatment Products in Eight State/One District Territory

Imbrium[®] Systems Corp. and Camtek Construction Products Corp. announced today that Camtek will be the exclusive distributor of Imbrium's complete line of stormwater treatment products in an eight state/one district territory in the eastern US.

Camtek, an exclusive representative of Imbrium's Stormceptor[®] oil and sediment separator since 1996, will expand its product representation to include Imbrium's Jellyfish[®] fine sediment filter, Sorbtive[™]FILTER and Sorbtive[™]MEDIA. Camtek's territory of representation includes New York, New Jersey, Ohio, West Virginia, Pennsylvania, Delaware, Maryland, Virginia and Washington, D.C.

"This is a natural fit for the market and our clients based on Camtek's solid representation and results delivered for more than ten years in the stormwater industry," says Rob Crossman, Imbrium's Group Manager.

Camtek and Imbrium also announced plans to work together to launch and market a metal removal technology. Camtek recently established an exclusive license agreement for this technology with the US Navy.

"We see a lot of opportunity and benefit as a result of our strengthened relationship," says Andy Virostek, President of Camtek. "Camtek has already added to its technical representation as a result of this agreement and expanded territory."

About Camtek

Camtek Construction Products is a leading provider of stormwater quality solutions for civil engineering and construction applications in the eastern United States. Camtek markets and sells innovative patented devices that remove pollutants from stormwater to protect waterways.

About Imbrium

Imbrium (imbriumsystems.com) is a green-tech company that designs and develops stormwater treatment technologies to protect water resources from pollutants. Incorporating Low Impact Development (LID) strategies and other Environmental Site Design (ESD) practices, Imbrium is committed to enhancing water quality through addressing the long-term impact of urban runoff.

Imbrium has a strong record of environmental innovation in the industry as the creator of the Stormceptor oil and sediment separator, the Jellyfish fine sediment filter, SorbtiveMEDIA and SorbtiveFILTER.
