KriStar to Distribute Sorbtive™MEDIA: Innovative Filtration Media to Remove Dissolved Phosphorus from Stormwater

Imbrium Systems Corp. and KriStar Enterprises Inc. announced today that KriStar has become a distributor of Imbrium's SorbtiveMEDIA, the breakthrough oxide-coated media that removes dissolved phosphorus from stormwater.

Field tests show that SorbtiveMEDIA captures 89% of sediment, 78% of Total Phosphorus (TP), and an unprecedented 44% of dissolved phosphorus. Phosphorus is a major cause of algae blooms often resulting in low dissolved oxygen, fish kills and public health hazards.

"We're very pleased to partner with KriStar," stated Rob Crossman, Imbrium's Group Manager. "KriStar and its product line are a great fit for SorbtiveMEDIA."

SorbitiveMEDIA will be integrated with KriStar's Perk Filters and TreePOD systems. The Perk Filter is a stormwater filtration device that reduces pollutant loading in urban runoff. The TreePOD Biofilter is a tree box filter that effectively removes ultra-fine and dissolved pollutants from stormwater runoff. According to the non-exclusive distribution agreement, SorbtiveMEDIA will also be distributed by KriStar for use with other BMPs including LID and ESD applications.

"We are very excited about the opportunity to include the SorbtiveMedia in our range of stormwater treatment solutions," reported Craig Beatty, KriStar's President. "Imbrium has been a pioneer in this industry and we look forward to working with them in the years ahead."

About KriStar

KriStar (www.kristar.com) is a manufacturer of stormwater management projects to address the control of pollutants from stormwater runoff. From construction through installation and maintenance, KriStar offers a complete treatment train approach to stormwater management.

About Imbrium

Imbrium (imbriumsystems.com) is a green-tech company that designs and develops stormwater treatment technologies, including the Stormceptor oil and sediment separator, the Jellyfish fine sediment filter, SorbtiveMEDIA and SorbtiveFILTER for enhanced phosphorus removal.
